

Second Supplemental Amendment  
U.S.S.N. 09/292,217  
Page 2 of 4

1. (Four Times Amended) A method of inducing a cytocidal immune response against a solid tumor in a mammal, the method comprising:

E1 administering to a mammal a combination of (i) an immunoconjugate comprising an antibody binding site capable of binding a target antigen associated with cancer and expressed on a target cell in a solid tumor and interleukin 2, and (ii) an angiogenesis inhibitor having binding affinity for  $\alpha_v\beta_3$  integrin,

wherein the combination induces a cytocidal immune response against the solid tumor that is greater than a response induced by the immunoconjugate alone.

20. (Four Times Amended) A composition for inducing an immune response against a solid tumor in a mammal, the composition comprising in combination:

E2 (i) an immunoconjugate comprising an antibody binding site capable of binding a target antigen associated with cancer and expressed on a target cell in a solid tumor and interleukin-2, and (ii) an angiogenesis inhibitor having binding affinity for  $\alpha_v\beta_3$  integrin,

wherein the combination induces a cytocidal immune response against the solid tumor that is greater than a response induced by the immunoconjugate alone.
